" 1. Opportunities for professional growth and development 2. Access to quality data 3. A collaborative and supportive work environment 4. Adequate computing resources 5. Clear alignment between company goals and data science projects

Achievements

Home   Profile   Jobs   Applied   Messages   Discover

scripts are used for data analysis and the same is stored in Big query and represented in Power BI dashboard. I was awarded with silver coin and spot recognition embarking my contribution for the development of dashboard.

Reviewed all the existing technologies which can used to differentiate between three-phase faults and power swings. The review paper is successfully published in Nova Science Publishers. link: https://novapublishers.com/shop/research-challenges-in-science-engineering-and-technology/

Experience

Assistant Manager - Data Analytics
Adani Green Energy

Home   Profile   Jobs   Applied   Messages   Discover

backend and Power-bi as front-end service. My day to day task involves implementation of AI algorithms to perform system checks on various electrical gears and analyzing the performance of the entire solar fleet. The steps in my task are mentioned below in the chronological order:

- Data extraction - The data is extracted from various sources such as pdf, web, html links, cvs, , databases, etc using python and SQL.

- Feature engineering - The is preprocessed using pandas, polar, regex, spacy and SQL queries and appropriate features are kept and transformed.

- Data Presentation: The furnished data is showcased to the management and it is represented in PowerBI.
